

Security Whitepaper & SLA Guarantees

Effective Date: September 1, 2026

Version: 3.0

Zero-Trust Architecture: SchoolLinx ensures dedicated tenant isolation, continuous cryptographic verification, and sub-minute disaster recovery failover.

1. Multi-Tenant Relational Schema Isolation

Rather than relying on soft logical filters in a single shared database table, SchoolLinx provisions a distinct PostgreSQL schema for every enrolled school node. Cross-tenant leakage is strictly prevented at the database engine level.

2. Disaster Recovery & Availability Metrics

Performance Indicator	Target SLA Metric	Architecture & Protocol
Monthly Service Uptime	99.99%	Multi-AZ redundant load balancers and container clusters.
Recovery Point Objective (RPO)	< 5 Minutes	Continuous PostgreSQL WAL archiving and geo-mirrored storage.
Recovery Time Objective (RTO)	< 15 Minutes	Automated standby failover and schema reconstruction scripts.
Daily Snapshot Backups	Hourly + Daily Snapshots	Encrypted geo-redundant storage replicated across 3 regions.

3. Incident Response & Support Tiers

Severity Level	Definition	Initial Response SLA
P1 - Critical Outage	Complete school portal inaccessibility or inability to process attendance/billing.	< 15 Minutes (24/7 dedicated incident response).
P2 - Major Feature Impact	SMS carrier delivery delay or individual gradebook report rendering error.	< 2 Hours during business hours.
P3 - Minor / Inquiries	General configuration questions, onboarding queries, or report customization.	< 24 Hours.

4. Cryptographic Encryption Standards

- **Disk & Volume Encryption:** AES-256 with Customer-Managed Keys (CMEK).
- **Network Encryption:** TLS 1.3 with Perfect Forward Secrecy (PFS).
- **Biometrics:** Unidirectional SHA-256 template hashing.
- **Verifiable Credentials:** SHA-256 document hashing for tamper-proof graduation certificates.
